The Internet of Things (IoT)

IoT is a network of physical objects (things) that are embedded with sensors, software, and other technologies, enabling them to collect and exchange data with other devices and systems over the Internet.

IoT has a wide range of applications, including:

- Smart homes (e.g., smart thermostats, smart lighting)
- Smart cities (e.g., smart traffic lights, smart waste management)
- Healthcare (e.g., remote patient monitoring, smart medical devices)
- Manufacturing (e.g., predictive maintenance, quality control)
- Agriculture (e.g., smart irrigation, crop monitoring)

IoT is a rapidly growing market, and its applications are expected to expand significantly in the coming years.
