Durability and reliability
The best solutions are made of tough aluminium and steel.
All parts, motors, batteries, controllers, and brushes must have good quality and safe construction.
Make sure the motor is working all day and runs days a week.

Configuration and performance
The range of riding and the feeling of the ride are the two most important points we are most interested in. We measured everything: Wt, 1000, 2000, and 10 inch tires.
The results were: 100 to 12000 and can reach a range of 100 to 1000.

Questions and answers

Q1. Can I purchase samples for testing?

Q3. What do we need if we want to launch electric sharing/lease business?

1. You need to attend the local government's get-together.
The person above your hierarchy is to discuss the field and explain that you can carry out this central business.

2. You need to attend a joint sharing session, including beyond sharing administration, service strategies.
If you need to attend, you need to find out the best solution solution with the science for you.

3. You need to find an incentive to make the business central task.

4. You also need to find another way to 3 answers, administrative system, and management also can be.

Q1. How do I change my E-mailer for shading? Who will change?

Q1. How to protect the scanner from being stolen?

Machine will have tracking system, and each scanner has a built in GPS tracking device. This is powered by a separate battery inside the scanner. After the scanner is lost, the tracking platform can
